ADITYA KAUSHIK PATEL

Mumbai, India | akp2k4@gmail.com | +91 7977036781 |in/aditya-kaushik-patel |github.com/adityapatel14

EDUCATION

B. Tech – Computer Engineering | K J Somaiya College of Engineering, Mumbai *2022 – 2026 | CGPA: 7.45*

TECHNICAL SKILLS

Programming: Python (Pandas, NumPy)
Data Base: SQL (MySQL)
Data Analysis: Exploratory Data Analysis (EDA), Hypothesis Testing, Regression Analysis,
Data Visualization: Power BI, Tableau, Matplotlib, Seaborn, Excel (Pivot Tables, Power Query, Data Validation, Advanced Formulas)
Tools & Systems: Git, Jupyter Notebook, VS Code, MS Excel, MS Office

CERTIFICATIONS

Google Cloud Data Analytics | Exploratory Data Analysis for Business | Accounting Data Analytics with Python

EXPERIENCE

Product Analyst | *picoNET* *Jan 2026 – Jun 2026*

- Analyzed CDN traffic data from Excel logs to identify caching patterns; recommended optimal content types and cache duration windows, achieving **~12%** cost-efficiency improvement potential.
- Researched and assessed feasibility of **2** inventory management add-ons by benchmarking competitive solutions and preparing structured reports to support product expansion decisions.
- Delivered cross-functional data visualizations and performance reports on CDN metrics, reducing stakeholder evaluation time by **20%** and enabling faster data-driven decisions.

Funds Analyst & Research Intern – SSRP Mega Project Team | *K J Somaiya School of Engineering* *Jan 2024 – Nov 2025*

- Conducted cost and vendor analysis using Excel & Power BI. Optimized a **₹6L** to **₹3L** (**~50%**) cost reduction by identifying functional alternatives.
- Examined **100+** procurement transactions to track spending variance and allocation. Maintained proper documentation for sponsors.
- Built KPI dashboards that reduced manual reporting effort by **30%**, enabling faster data driven decision making for cross functional teams.

PROJECTS

Student Internship Trend & Demand Analytics Dashboard | *SQL, Power BI*

- Analyzed **2,004** internship records of **KJ Somaiya College of Engineering students** to understand participation trends, seasonal patterns and stipend availability gaps across academic years (FY - LY) using Python and Power BI.
- Performed EDA, trend and distribution analysis in Python (Pandas, Matplotlib, Seaborn) and built an interactive Power BI dashboard.
- Identified a **59% decline** in paid internships (2021-2024) reaching a **97%** cumulative **drop** by **2025**. Revealed June to July to be the peak season with **61 days** as average duration. Delivered insights to academic stakeholders for policy decisions.

Business KPI & Performance Analytics Dashboard | *SQL, Power BI*

- Processed **10,000+** US supermarket sales records across 5,009 orders (2014 - 2017) using SQL to extract key KPIs including **$2.3M** total sales**, $286.4K** profit and **12.47%** profit margin.
- Built an interactive **Power BI** dashboard with dynamic filters for region, category, segment and date to visualize sales trends, profit margins and product level performance.
- Identified Consumer segment contributing **50.3%** of total sales and West region being the top-performing, highlighting high discount products **(60–80%)** as major loss-making chunk. Supported data driven pricing decisions.

Movie Ratings Bias Analysis – Fandango Case Study | *Python (Pandas, Matplotlib, Seaborn)*

- Observed 500+ movie ratings across 5 platforms using Python (Pandas, Matplotlib, Seaborn) to investigate rating inflation through EDA and distribution analysis.
- Quantified Fandango's systematic upward bias of ~0.7–0.8 pts vs IMDB and up to 1.8 pts vs other platforms, confirming commercially motivated rating inflation.

ACHIEVEMENTS

Represented KJSCE in the National-level INSPACE (ISRO) CanSat & Model Rocketry Competition Finals *Nov 2025*
